Semester I

1.1 Major 1

Course Title	PROBLEM SOLVING USING C
Course Credits	2
Course Outcomes	After Completion of this Course, students will be able to
	1. Apply logic to create programs in C.
	2. Analyze and understand computer programming language concepts.
	3. Evaluate and interpret the use of pointers, including their declarations, initialization, and operations.
	4. Design and develop applications using basic programming constructs, facilitating the transition to other languages.
Module1 (Credit1)	
Learning Outcomes	After learning this module, learners will be able to
	1. Learn steps in problem solving using C.
	2. Understand structure, keywords, operators, and functions of C programming.
	3. Evaluate the concept of I/O functions, header files, and preprocessor directives.
	4. Design and apply concepts of the C language.
Content Outline	• Introduction to problem solving: Concept: Steps in problem solving - (Define Problem, Analyze Problem, Explore Solution), Problem solving techniques - (Trial & Error, Brain Storming, Divide & Conquer), Algorithms and Flowcharts (Definitions, Characteristics, Advantage & Disadvantages, Symbols Examples), Pseudo-code (Definition, Conditional statements, Loops), etc. • Overview of programming languages: Definition of the program, Concept- Source code, Object code, Compilation, Interpretation, Execution, Input and Output, Debugging etc., Expressions, control structures; sub routines, Storage management; scoping rules; bindings for names, Storage types: Automatic, external, register and static variables • Introduction to 'C' Language: History of C Programming, Structures of „C“ , Programming, Simple example, Basic Input/ Output, Function as building blocks. Language Fundamentals: Character set, CTokens, Keywords, Identifiers, Variables, Constant, Data Types, Comments
	• Operators: Types of operators, Precedence and Associativity, Expression. Statement and types of statements, Built-in Operators and function. Console based I/O and related built in I/O Function: printf(), scanf(), getch(), getchar(), putchar(), etc; Concept of header files, Preprocess ordirectives: #include, #define, Conditional statements and Loops
Module2 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Gain proficiency in writing C programs to solve various problems.
	2. Learn the syntax and semantics of the C language, including its specific features such as pointers and memory management.
	3. Analyze the difference between structure and union.

	4. Design and handle operations of the files.
Content Outline	• Control structures ➤ Decision making structures: If, If-else, Nested If –else, Switch, Loop Control structures ➤ While, Do-while, For, Nested for, while, do-while loop, jumping statements: break, continue, go to, exit. • Functions: Definition, Basic types of function, Declaration and definition, Function call, Types of function, Parameter passing, Call by value, Call by reference, Scope of variables, Recursion, String: Declaration, string Functions, String Manipulations • Pointers: Introduction to pointers, Pointer notation, Pointer arithmetic, Null Pointer • Arrays: Definition, Declaration, Initialization, Bounds checking, One-Dimensional Array, Two-Dimensional Array, Passing array to a function, pointer to Array • Structure and Union: Introduction to Structure, Definition, Declaration of Structure Variables, Dot Operator, Nested Structure, Array of Structure, pointer to structure, Introduction to Union, Difference between Structure and Union • File Handling: Concept of File, Definition, File operations (create, open, read, move, write, close), File opening Mode, Closing a file, Input / output operations, Creating and reading a file, Command Line Argument

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

1. Create a flowchart and algorithm for a simple problem (e.g., calculating the factorial of a number).
2. Write a pseudo-code for the above problem.
3. Convert the pseudo-code into a C program.
4. Demonstrate the use of basic input/output functions such as printf() and scanf() in the program.
5. Include the use of variables, constants, and data types.
6. Write a C program to demonstrate the use of different operators (arithmetic, relational, logical, bitwise, etc.). Create examples to illustrate the precedence and associativity of operators and evaluate expressions.
7. Include conditional statements and loops in the program to show complex expressions and their evaluations.
8. Demonstrate the use of console-based I/O functions such as printf(), scanf(), getch(), getchar(), putchar(), etc.
9. Illustrate the use of header files and preprocessor directives (#include, #define).

Module 2:

1. Write C programs using different control structures (if, if-else, switch, while, do-while, for loops). Include programs that utilize nested loops and jumping statements (break, continue, go to).
2. Create programs that use functions to perform various tasks. Include examples of parameter passing (call by value and call by reference).
3. Write a program that includes recursion and demonstrates string manipulation using string functions.
4. Develop a program that uses pointers for arithmetic operations and demonstrates the concept of null pointers.
5. Write a program to handle arrays (one-dimensional and two-dimensional) and pass them to functions. Include pointer to array operations.
6. Write programs to perform basic file operations (create, open, read, write, close). Include programs that demonstrate reading from and writing to files.

7. Implement a program that uses command-line arguments for file operations.
8. Compare and contrast the use of structures and unions in handling data through a practical example in a program.

1.1 Major(Core)

Course Title	PROBLEM SOLVING USING C (LAB)
Course Credits	2
Course Outcomes	After completion of this Course, the students will be able to
	1. Apply algorithms by writing C code.
	2. Analyze and trace the execution of C programs.
	3. Evaluate the use of pointers, arrays, and the pre-processor in programs.
	4. Design programs that utilize derived data types and implement simple file operations.
Module1 (Credit 1)	
Learning Outcomes	After learning this Module, learners will be able to
	1. Apply operators to write simple programs.
	2. Analyze and use control, iterative, and jumping statements.
	3. Evaluate the use of break and continue statements.
	4. Design programs with header files and preprocessor directives.
Content Outline	• Simple Program • Implementation of Operators: Built in Operators and function, Arithmetic, Logical, Relational, bitwise, Precedence And Associativity, composite statements. Unary, binary and ternary operators. • Concept of header files, Preprocessor directives: #include, #define. And macros implementations, Implementation of Storage types: Automatic external, register and static variables • Console based I/O and related built in I/O function: printf(), scanf(), getch(), getchar(), putchar(); • Control Statement: Decision Making Statements, if, Nested if, if-else, Nested if-else, if-else-if, switch, etc. The Conditional Expression; • Iterative Statements- The for loop, . The while loop, The do-while loop; Jumping Statements- The goto & label, The break & continue, The exit()function
Module 2 (Credit 1)	
Learning Outcomes	After learning this Module, learners will be able to
	1. Apply functions in programs.
	2. Analyze the declaration, initialization of pointers, and passing arrays to functions.
	3. Evaluate the definitions and declarations of structure variables in programs.
	4. Design programs effectively using functions, pointers, and structures.

Content Outline	• Implementation of Functions: Defining and accessing, passing arguments, Function prototypes, function calling mechanism, call by value, call by reference, recursive function; String Manipulations • Pointer Declaration and Initialization of Pointer variables, pointer Arithmetic, Pointers and Character Strings Implementation of 1-D and multidimension Array, One-Dimensional Array, Two-Dimensional Array, Passing array to a function, pointer to Array. • Programs Using Structure and Union: Defining and Declaring Structure Variables, .Dot Operator, Nested Structure, Array of Structure, pointer to structure, Examples of Union. • Programs using I/O Operations File Handling: File Operations (Create, open, read, move, write, close) Input/output operations on file Character by –(fgetc, fputc), Reading and writing files
------------------------	--

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

• Module 1

Write a C program that implements a simple calculator. The program should prompt the user to enter two numbers and an operator (+, -, *, /). Based on the operator entered, perform the corresponding arithmetic operation and display the result.

1. Use appropriate control flow statements (if, else if, else or switch) to determine the operation to be performed based on the operator entered by the user.
2. Implement error handling to handle division by zero.
3. Utilize console-based input/output functions like printf(), scanf() for user interaction.
4. Make use of header files and preprocessor directives to organize your code and define any necessary constants.

Module 2

Write a C program that demonstrates the use of functions, pointers, and structures to manage student records. Each student record should contain the following information: name, roll number, marks in three subjects.

1. Define a structure to represent a student record with appropriate data members.
2. Implement functions to perform the following tasks:
3. Input student details (name, roll number, marks).
4. Calculate the total marks and average marks of a student.
5. Display student details along with total and average marks.
6. Use pointers to pass structures to functions wherever necessary.
7. Ensure proper memory allocation and deallocation.
8. Implement file handling operations to read and write student records to a file using input/output functions like fscanf(), fprintf(), fopen(), fclose(), etc.

Assessment:**Internal Assessment – 50 Marks****Evaluation Scheme:**

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below.

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Code Implementation	• Accuracy in writing and executing the C program, correct logic, syntax	15
Problem Understanding	• Clarity of problem interpretation and correct approach	10
Output Correctness	• Program compiles without errors and gives correct output	10
Code Quality & Structure	• Proper use of indentation, comments, meaningful variable names, modularity	5
Debugging Skills	• Ability to identify and fix logical/syntax errors during execution	5
Lab Record/Journal	• Completeness, correctness, formatting, and timely submission	5

Given below are two sample projects but it is expected to work on similar sort of projects

Project 1: Using C Language create a system that analyzes and evaluates the performance of students based on their scores, using computational problem-solving techniques.

Project 2: Using C Language, build a project that performs various matrix operations and demonstrates their real-world applications.

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted.

1.2 Major (Core)

Course Title	Mathematics Foundations to Computer Science - I
Course Credits	2 Credits
	1. Familiarize with computer terminology, demonstrate problem-solving skills, and describe programming languages and their evolution. 2. This course enables the students to use mathematical models and techniques to analyze and understand problems in computer science 3. This course demonstrates how the mathematical principles give succinct abstraction of computer science problems and help them to efficiently analyze
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	Understanding and Applying Set Theory and Relations
	Analyzing and Working with Functions
	Mastering Counting Techniques and Recurrence Relations
Content Outline	Set, Relation and Function: Set, Set Operations, Properties of Set operations, Subset, Venn Diagrams, Cartesian Products. Relations on a Set, Properties of Relations, Representing Relations using matrices and digraphs, Types of Relations, Equivalence Relation, Equivalence relation and partition on set, Closures of Relations, Warshall's algorithm. Functions, properties of functions (domain, range), composition of functions, surjective (onto), injective (one-to-one) and bijective functions, inverse of functions. Some useful functions for Computer Science: Exponential and Logarithmic functions, Polynomial functions, Ceiling and Floor functions. Counting and Recurrence Relation: Basics of counting, Pigeonhole principle, permutation, combination, Binomial coefficients, Binomial theorem. Recurrence relations, modelling recurrence relations with examples, like Fibonacci numbers, the tower of Hanoi problem. Solving linear recurrence relation with constant coefficients using characteristic equation roots method.
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	Understanding Fundamental Concepts in Graph Theory
	Analyzing and Applying Matrix Operations
	Exploring Advanced Matrix Concepts and Application
Content Outline	Elementary Graph Theory: Basic terminologies of graphs, connected and disconnected graphs, subgraph, paths and cycles, complete graphs, digraphs, weighted graphs, Euler and Hamiltonian graphs. Trees, properties of trees, concept of spanning tree. Planar graphs. Definitions and basic results on the topics mentioned.

	Matrix Algebra: Types of matrices, algebra of matrices—addition, subtraction, and multiplication of matrices, determinant of a matrix, symmetric and skew-symmetric matrices, orthogonal matrix, rank of a matrix, inverse of a matrix, applications of matrices to solve system of linear equations, Eigen values and Eigen vectors, Caley-Hamilton theorem
Assignments towards Comprehensive Continuous Evaluation	
Worksheet to be prepared by Teachers on each module and given to students for practice. The correction of the worksheets to be done by the teachers and feedback to be given to the class for better improvement in their end semester examination.	
Explain how logic, sets and relations are applied in Computer Science. Provide an example to support your explanation

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted

1.3 OEC (Open Elective Course -I)

Course Title	Digital Marketing
Course Credits	4
Course Outcomes	After completion of this Course, the students will be able to
	1. Apply principles and foundations of digital marketing.
	2. Analyze data to optimize marketing strategies and campaigns.
	3. Evaluate digital marketing performance using analytics tools.
	4. Design effective marketing using digital channels, customer insights, and segmentation.
Module1 (Credit1)	
Learning Outcomes	After learning this module, learners will be able to
	1. Apply principles and techniques of digital marketing using various channels and tools.
	2. Analyze and understand SEO techniques.
	3. Evaluate the effectiveness of digital marketing strategies.
	4. Design comprehensive digital marketing campaigns.
Content Outline	• Basics of Websites & Digital Marketing: - ➤ Fundamental of Digital Marketing: Concept, Scope, Areas to Explore ➤ Building Websites on Weebly, WordPress & Blogger ➤ Designing: Canva Tool for Image Editing and Photoshop Graphics • SEO -On Page Optimization: - ➤ Broken links, Backlinks, W3 Errors, Keyword research & optimization Heading Tag Optimization: Reporting, Suggestion and Implementing Backlinks, Titles & Meta Descriptions, Website Content Optimization Meta& Title Tags Adjustment, XLM Site Map Setup, Robot.txt Validation Google Analytics and Webmaster Tool Setup ➤ SERP - rankings on google, Plugins Installation and Monitoring Heading Tag Optimization: Reporting, Suggestion and Implementing Duplicate Content Reporting ➤ Duplicate Content Rewording/rewriting using seo target keywords ➤ Plugins & Internal Linking, Permalinks Optimization: Reporting, Suggestion and Implementing
Module2 (Credit1)	
Learning Outcomes	After learning this module, learners will be able to
	1. Apply strategies for effective campaigns.
	2. Analyze website metrics using Google Analytics.
	3. Evaluate important metrics for SEM campaigns.
	4. Design and optimize campaigns based on analytics data.
Content Outline	• Social Media Optimization: - Custom Graphics and Setting Profile with about/ hours and other information of business: For your Social Media Account
Module3 (Credit1)	
Learning Outcomes	After learning this module, learners will be able to
	1. Apply business analytics techniques for data-driven marketing decisions.
	2. Analyze data insights to optimize marketing strategies and campaigns.
	3. Evaluate the effectiveness of data-driven marketing decisions.
	4. Design marketing strategies based on interpreted data insights.

Content Outline	• Social Media Content Creation and Posting: 5 Social Media Platform: 2 posts for each platform and 1 Image Post and 1 interesting post found related to the business you are in on web and shared on your page each day. Along with: Commenting, Follows, Likes, Shares • Paid Advertising: Email Marketing, FB Marketing & Google AdWords Facebook Marketing: Ad Plan, Ad Setup with Banner Images, Monitoring & Reporting (1 Ad: Website Conversion, Apps Installation, Promote Page Etc.) Google AdWords: Search Ads Type: Keyword Research, 1 Campaign, 2 Ad groups, 5 Ads. Display Ads: 2 Banner Graphics keyword Research, 1 Ad Group, 2 Ads. • Email Marketing: Content Writing as per Offers, services & Discounts Custom Template Building, HTML Conversion, Use of Emailing Software: Account Creation, Creating Customer List, Sending Emails
Module4 (Credit1)	
Learning Outcomes	After learning this module, learners will be able to
	1. Apply appropriate metrics and analytics tools to measure digital marketing campaign performance.
	2. Analyze data gathered from campaigns to evaluate their effectiveness.
	3. Evaluate the performance of digital marketing campaigns based on measured metrics.
	4. Design strategies for optimizing digital marketing campaign performance based on evaluation results.
Content Outcomes	• Video sharing platform Optimization: Posting, pinning, repinning Analytics: Search engine Analytics, Installing Analytics, How to Study search engine Analytics, Interpreting Bars & Figures, How Analytics can Help SEO, Advanced Reporting, Webmaster Central, Bing/Yahoo, Open Site Explorer, Website Analysis using various SEO Tools available. • Reporting and Monitoring: - SEO REPORT/plan, Initial website ranking and evaluation report Analytics report and web master report Ad Words Report, Fb Insight, Marketing Media Audit Reports ERP Report, Competitor Analysis Report(Media Audit Report)

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

• Module 1:

Design and execute an SEO audit for a website.

1. Perform on-page optimization tasks such as checking for broken links, W3 errors, keyword research, optimizing heading tags, titles, and meta descriptions.
2. Implement necessary changes based on the audit findings, including fixing broken links, optimizing content, and adjusting meta tags.
3. Set up essential tools like Google Analytics and Google Webmaster Tools for monitoring website performance and tracking SEO metrics.
4. Create a comprehensive report summarizing the audit findings, implemented changes, and recommendations for further optimization.

Module 3:

Develop a social media marketing campaign for a business.

1. Create custom graphics and optimize social media profiles for the selected business on major platforms like Facebook, Twitter, Instagram, etc.
2. Plan and execute a paid advertising campaign using platforms like Google AdWords and social media ads.
3. Design and send email marketing campaigns, including content creation, template building, and email list management.
4. Monitor and analyze the performance of the campaigns using relevant metrics and

analytics tools.

5. Prepare detailed reports showcasing campaign performance, including insights, key metrics, and recommendations for improvement.

Assessment:

Internal Assessment: (50 marks)

Evaluation Scheme:

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below.

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Practical Task Execution	Implementation of lab assignments like SEO, SEM, content creation, campaign setup, etc.	10
Tool Usage Proficiency	Effective use of tools such as Google Analytics, AdWords, SEMrush, Canva, Mailchimp, etc.	10
Creativity and Content Quality	Originality and relevance of ad copies, social media posts, blogs, email marketing, etc.	10
Results & Performance Analysis	Use of KPIs, interpreting metrics like CTR, bounce rate, impressions, engagement, etc.	5
Lab Report/Documentation	Structure, completeness, insights, and submission quality of lab work or project reports	5
Viva Voce	Conceptual understanding of digital marketing strategies and tool functionalities	5
Attendance and Discipline	Regular attendance, punctuality, and active participation in lab sessions	5

Given below are two sample projects but it is expected to work on similar sort of projects.

Project 1: Design and execute a social media campaign to promote a product, service, or event. (Choose a target audience and platform (e.g., Instagram, LinkedIn, Facebook, create content (images, videos, carousels), Schedule posts using tools like Hootsuite or Buffer, analyze campaign performance using insights from the platform.)

Project 2: Create and manage a Google Ads campaign for a specific goal (e.g., increasing website traffic or conversions). (Perform keyword research using Google Keyword Planner, write ad copy and set up ad groups, Define budgets, bids, and targeting options, Track and analyse ad performance using Google Ads analytics)

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted

Semester I

1.4 VSC

Course Title	Office Automation Tools
Course Credits	2
Course Outcomes	After going through the course, learners will be able to 1. Apply office automation concepts and technologies to integrate office tools and equipment, enhancing communication efficiency in the workspace. 2. Analyse and evaluate proficiency in Writer and Calc, demonstrating mastery in text formatting, styles, graphics, tables, formulas, functions, and data analysis techniques. 3. Design and manage complex documents and data using advanced features such as master documents, fields, forms, mail merge, data linking, collaboration tools, reviewing capabilities, and macros. 4. Create and customize presentations in Impress, applying design principles to master slide creation, text and graphic formatting, slide transitions, animations, and various exporting options.
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply the concepts of office automation by integrating office tools, equipment, and technologies to optimize workspace communication and efficiency. 2. Analyse and evaluate proficiency in using the Writer tool for text formatting, style application, graphics and table integration, mail merge operations, and document customization. 3. Design and manage complex documents by applying advanced features like templates, master documents, fields, forms, and creating tables of contents, indexes, and bibliographies.
Content Outline	• Concept of Office Automation: Purpose of an office, activities in an office, structure of an office, office manual, document flow management in an office, need for office automation and its advantages and disadvantages, Office automation tools. • Office Automation Technology: Office equipment, Workstation communication and convergence of Technologies • Writer -Introducing Writer -Working with Text - • Formatting Pages - Printing, Faxing, Exporting, and Emailing • Introduction to Styles - Working with Styles - • Working with Graphics - Working with Tables – Working with Templates in Writer - Using Mail Merge – Creating Tables of Contents, Indexes, and Bibliographies - • Working with Master Documents - Working with Fields - Using Forms in Writer- Customizing Writer
Module 2(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply Calc skills for proficient data management, analysis, and sharing, utilizing formulas, functions, and macros to enhance productivity. 2. Analyse and evaluate proficiency in creating and customizing presentations in Impress, employing text and graphic formatting, slide transitions, animations, and various exporting options.

Content Outline	• Calc: Introducing Calc, Entering, Editing, and Formatting Data, Using Charts and Graphs, Using Styles and Templates, Using Graphics in Calc, Printing, Exporting, and E-mailing, Formulas and Functions, Using the Data Pilot, Data Analysis, Linking Calc Data, Sharing and Reviewing, Calc Macros • Impress: Guide Introducing Impress, Using Slide Masters, Styles, and Templates, Adding and Formatting Text, Adding and Formatting Pictures, Managing Graphic Objects, Formatting Graphic Objects, Spreadsheets, Charts, and Other Objects, Slides, Notes, and Handouts, Slide Shows : Transitions, Animations, Printing, Emailing, Exporting, and Saving Slide Shows, Setting Up and Customizing Impress
------------------------	---

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

1. Research and identify three different office automation tools available in the market.
2. Evaluate their advantages and disadvantages in terms of optimizing communication and efficiency in a workplace setting.
3. Choose one tool and create a presentation using Impress to explain its features and benefits to your colleagues.

Module 2:

1. Using Writer, create a complex document that includes text formatting, graphics, tables, and styles.
2. Apply mail merge functionality to personalize documents for a hypothetical mailing list of 20 recipients.
3. Evaluate the effectiveness of Writer's features for document customization and mail merge operations in a short reflective report (500 words).
- 4.
5. Design a comprehensive office manual template in Writer that includes sections for document flow management, office structure, and activities.
6. Incorporate advanced features such as master documents, fields, and forms to create a dynamic and interactive document.
7. Produce a table of contents, an index, and a bibliography within the manual template to demonstrate proficiency in document design and management.

Assessment:

Internal Assessment: (50 marks)

Evaluation Scheme:

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below.

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Document Formatting (Word)	Consistently applies styles, headers, tables, bullets, TOC perfectly.	10
Spreadsheet Functions (Excel)	Uses formulas, charts, and functions (SUM, IF, VLOOKUP, etc.) accurately and effectively.	10
Presentation Skills (PowerPoint)	Slides are professional, well-designed, with animations and transitions effectively used.	10
Database Handling (Access or equivalent)	Well-structured tables, queries, forms, reports; relationships defined.	5
Presentation & Documentation	Project well-documented with clear screenshots, explanations, and references.	5

Given below are two sample projects but it is expected to work on similar sort of projects

Project 1: “Small Business Management Toolkit”

Create a comprehensive Office Automation Toolkit to manage a small business (e.g., a bakery, bookstore, or tailoring service).

Project 2: “Event Planning System”

Create a digital system to manage all documentation and logistics for a college event (e.g., seminar, cultural fest, sports day).

Semester I

1.5 SEC

Course Title	FUNDAMENTALS OF COMPUTER SCIENCE
Course Credits	2
Course Outcomes	After completion of this Course, the students will be able to
	1. Apply computer fundamentals comprehensively.

	2. Analyze and solve problems using programming and software development skills. 3. Evaluate proficiency in programming languages, software development life cycles, and debugging techniques. 4. Design software with strong internet literacy and effective problem-solving skills.
Module1 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply knowledge of essential computer components, including CPU, input/output devices, memory, and storage.
	2. Analyze internal data representation, including number systems, binary arithmetic, Boolean algebra, and logic gates.
	3. Evaluate the functions of various input/output devices and interfaces within computer systems.
	4. Design an understanding of basic computer organization and the roles of CPU, memory, and secondary storage.
Content Outline	• Knowing computer: What is Computer, Basic Applications of Computer; Components of Computer System, Central Processing Unit (CPU), Input/output Devices, Computer Memory, Concepts of Hardware and Software; Concept of Computing, Data and Information, classification of computers, various generations of computers; What is an Operating System; Different Popular Operating Systems; The User Interface, System Software: System software Vs. Application Software, Types of System Software, Introduction and Types of Operating Systems • Internal data Representation in Computers and Digital System Design: Number Systems Used in Computers, Converting from One Number System to Another, Binary Arithmetic, Boolean Algebra, Boolean Functions, Logic Gates, Logic Circuits • Computer Architecture: Basic Functions of a Computer, Basic Computer Organization, CPU Architectures, Memory Architectures, Secondary Storage, Classification of Secondary Storage, Memory Storage Devices, Input- Output Devices ,Input Devices, Output Devices, I/O Interfaces.
Module2 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply knowledge of computer language evolution and types.
	2. Analyze programming constructs, algorithms, and flowcharting skills.
	3. Evaluate the roles of language processors, software development, and the SDLC.
	4. Design an understanding of basic computer networks, internet connectivity, and the architecture of the World Wide Web.
Content Outline	• Computer Languages: Definition, Generations of computer languages, Types of Languages, Language Processors: Assembler, Interpreter, Compiler, Linker and Loader. Programming constructs, Algorithm & flowchart. • Software: Basic Concepts and Terminologies, What is Software? ,Relationship between Hardware and Software, Software Development Life Cycle (SDLC), Advantages of SDLC Model, Limitations of SDLC Model, Software Testing and Debugging • Introduction to Internet: WWW and Web Browsers: Basic of Computer networks; LAN, WAN; Concept of Internet; Applications of Internet; connecting to internet; What is ISP; Knowing the Internet; Basics of internet connectivity related troubleshooting, World Wide Web; Web Browsing software, Search Engines; Understanding URL; Domain name; IP Address; Using e-governance website

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1 :

1. W

rite and analyze the internal data representation in computers, covering number systems, binary arithmetic, Boolean algebra, and logic gates.

the

fundamental components and concepts of computer systems.

2. Explain the basic components of a computer system, including CPU, input/output devices, memory, and storage.
3. Describe the internal data representation in computers, covering number systems, binary arithmetic, Boolean algebra, and logic gates.
4. Discuss computer architecture, including CPU architectures, memory architectures, and secondary

storage.

5. Analyze the functions and roles of input/output devices and interfaces within computer systems.
6. Provide examples and illustrations where necessary to clarify concepts.
- 7.

Module 2 :

1. Develop a presentation on computer languages, software development, and the basics of internet connectivity.
- 2.
3. Explain the evolution and types of computer languages, including the generations of languages and the role of language processors (assembler, interpreter, compiler, linker, and loader).
4. Discuss programming constructs, algorithms, and flowcharting skills.
5. Describe basic concepts and terminologies related to software, including the software development life cycle (SDLC), software testing, and debugging.
6. Provide an introduction to the internet, covering basic computer network concepts (LAN, WAN), internet connectivity, and the architecture of the World Wide Web.
7. Include examples and case studies to illustrate key points effectively.

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted

Semester II

2.1 Major (Core)

Course Title	Object Oriented Programming Using C++
Course Credits	2
Course Outcomes	After going through the course, learners will be able to
	1. Apply object-oriented programming concepts in C++.
	2. Analyze problems and develop C++ programs to solve them.
	3. Evaluate the use of file input/output in C++.
	4. Design solutions using object-oriented programming principles in C++.
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply fundamental programming concepts including variables, data types, control structures, functions, arrays, and objects.
	2. Analyze and implement object-oriented programming concepts like objects, classes, and defining functions and variables.
	3. Evaluate the use of object-oriented programming in solving programming problems.
	4. Design solutions using a combination of fundamental programming and object-oriented concepts.
Content Outline	• Evolution of OOP: Advantages and disadvantages of OOP over its predecessor paradigms. • Characteristics of Object-oriented Programming: Abstraction, Encapsulation, Data hiding, Inheritance, Polymorphism, Code Extensibility and Reusability, User defined Data Types. • C++ Program Structure, Simple Input/ Output Program, Program Comments, Identifiers, Literals, String, Character, Integer, Floating Point, Constants, Keywords, Data Types, Operators in C++, Control Structures in C++. • Object and Classes: Core object concepts, Encapsulation, Abstraction, Polymorphism, • Classes, Messages Association, Interfaces, Implementation of class in C++, C++ Objects as physical object, C++ object as data types constructor Object as function arguments. • Functions and Variables: Functions: Declaration and Definition, Variables: Definition Declaration, and Scope, Dynamic Creation and Derived Data, Arrays and Strings in C++.
Module 2(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply concepts of constructors, inheritance (including its types), and polymorphism in C++.
	2. Analyze file input/output handling in C++ and class templates.
	3. Evaluate the effectiveness of constructors, inheritance, and polymorphism in solving programming tasks.
	4. Design solutions involving file input/output operations and the utilization of class templates in C++.
Content Outline	• Inheritance: Concept of Inheritance, Derived class and base class, Types of Inheritance, Functions and Friend Functions. • Constructors: Multiple Constructors and Initialization, Using Destructors to Destroy Instances. • Polymorphism: Syntax for Operator overloading, overloading of unary and binary operators. • File input and output: Reading a File, Managing I/O

	Streams, opening a File – Different Methods, Checking for Failure with File Commands
	• Class templates: Implementing a class template, implementing class template member functions, Using a class template, Function template.

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

- Develop a console-based application in C++ that demonstrates the implementation of fundamental programming concepts and object-oriented principles.
- Create a C++ program that includes classes representing real-world entities (e.g., a student, a car, a bank account).
- Implement basic functionality within these classes, such as setting and retrieving object attributes, defining member functions for data manipulation, and demonstrating encapsulation and abstraction.
- Utilize inheritance to create derived classes that inherit properties and behaviors from base classes, showcasing the concept of code reusability.
- Incorporate polymorphism by defining virtual functions and overriding them in derived classes to demonstrate runtime polymorphism.
- Implement file input/output operations to store and retrieve data related to objects, showcasing the handling of persistent data using C++.
- Document your code thoroughly and provide comments to explain the purpose and functionality of each component.

Module 2 :

- Design and implement a template-based class hierarchy in C++ for managing a generic data structure.
- Define a base template class that represents a generic data structure (e.g., a linked list, a stack, a queue).
- Implement derived template classes that inherit from the base class and specialize it to handle specific data types or functionalities (e.g., a linked list of integers, a stack of strings).
- Utilize constructor overloading to provide flexibility in initializing instances of the template classes.
- Implement operator overloading to enable intuitive manipulation of objects within the class hierarchy (e.g., addition, subtraction for mathematical operations).
- Use file input/output operations to demonstrate the serialization and deserialization of objects of the template classes.
- Test your implementation with various data types and scenarios to ensure correctness and functionality.
- Provide comprehensive documentation explaining the design decisions, implementation details, and usage instructions for the template-based class hierarchy.

2.1 Major (Core)

Course Title	Object Oriented Programming Using C++ (Lab)
Course Credits	2
Course Outcomes	After going through the course, learners will be able to 1. Apply object-oriented programming concepts by creating programs with classes and objects in C++. 2. Analyze the implementation of object-oriented programming concepts in C++. 3. Evaluate the effectiveness of stream I/O and file I/O in developing applications. 4. Design object-oriented programs using templates and exceptional handling techniques in C++.
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply the learned concepts by writing simple programs using classes and objects in C++. 2. Analyze the implementation of object-oriented programming concepts in C++ to understand their functionality and usage. 3. Evaluate the effectiveness of object-oriented programming in solving programming tasks. 4. Design solutions using object-oriented programming concepts to improve code structure and modularity in C++.
Content Outline	• Simple Programs on fundamental Data Types and I/O operators, Derived data types, Symbolic constants, variables and Reference variables • Operators and decision control structures: Programs to implement if statements, Switch statements, Loop statements • Functions in C++: Programs based on feature of an inline function, default arguments, function overloading, call by value, call by address, Call by reference. • Advanced Language Constructs: Program based on concept of Linear array, multidimensional array, pointer
Module 2(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply the concepts of inheritance, constructors, and operator overloading by writing simple programs in C++. 2. Analyze the process of reading and creating text files using C++ programs.
	3. Evaluate the effectiveness of inheritance, constructors, and operator overloading in solving programming tasks. 4. Design programs that utilize inheritance, constructors, and operator overloading for improved code organization and functionality in C++.
Content Outline	• Object and Classes: Program based on class, member function, One function calls another Function, arrays within a class, How to use a array in a class, static class member, Class member should be a static variable, Array of object. • Friend Function • Inheritance: • Constructor and Destructor: • Polymorphism: • Files and streams: • Class templates: Implementations of Class template, Class template with multiple parameters, Function template

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

- Develop a set of C++ programs that demonstrate the fundamental concepts of object-oriented programming (OOP).
- Write a C++ program that utilizes classes and objects to represent real-world entities (e.g., a car, a student, a bank account).
- Implement simple programs to demonstrate the usage of derived data types, symbolic constants, variables, and reference variables.
- Create programs that utilize decision control structures such as if statements, switch statements, and loop statements to demonstrate control flow in C++.
- Design and implement functions within classes to showcase encapsulation and abstraction principles.
- Provide comments and documentation within your code to explain the purpose and functionality of each component.

Module 2 :

- Design a series of C++ programs that utilize inheritance, constructors, operator overloading, and file handling.
- Implement a program that demonstrates the concept of inheritance by creating a base class and derived classes that inherit from it, showcasing the reuse of code and the specialization of functionality.
- Write programs that utilize constructors and destructors to initialize and clean up resources within objects, demonstrating the importance of proper resource management.
- Implement operator overloading in C++ programs to demonstrate the ability to define custom behavior for operators such as +, -, *, etc.
- Develop programs that read from and write to text files using file handling techniques in C++, showcasing the ability to manipulate external data.
- Utilize class templates to create generic data structures or algorithms that can operate on different data types, demonstrating the power of template-based programming.
- Test your programs with various scenarios and inputs to ensure correctness and functionality.
- Provide comprehensive documentation explaining the design decisions, implementation details, and usage instructions for each program.

Internal Assessment – 50 Marks

Evaluation Scheme:

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Evolution & Concepts of OOP	Understanding of OOP evolution, advantages/disadvantages vs procedural programming. Clear explanation of abstraction, encapsulation, inheritance, polymorphism, and reusability.	10
C++ Program Structure	Demonstrates correct program structure with comments, proper use of identifiers, literals, keywords, data types, and operators.	10
Input/Output and Control Structures	Correct use of input/output (cin, cout), conditional statements (if, switch), and loops (for, while, do-while).	10
Classes and Objects	Correct implementation of classes, constructors, destructors, objects, member functions, and passing objects as arguments. Applies encapsulation and abstraction.	10
Inheritance	Accurate implementation of inheritance (single, multiple, multilevel, hierarchical), correct base and derived class usage, and understanding of access specifiers.	10

Given below are two sample projects but it is expected to work on similar sort of projects

Project 1: Employee Payroll Management System

A payroll system that handles different types of employees, calculates salaries based on employee type (Full-time, Part-time, Contract), and generates reports using file handling.

Project 2: Student Report Card Management System

Create a system that manages student records, calculates grades, and saves report data using OOP principles and file handling.

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted.

Semester II

2.2. Major (Core)

Course Title	Operating System
Course Credits	2
Course Outcomes	After going through the course, learners will be able to
	1. Apply knowledge of computer system organization and architecture to solve complex problems.
	2. Analyze the structure, operations, and design principles of operating systems.
	3. Evaluate virtualization techniques, including virtual machines and operating system generation, for efficiency and effectiveness.
	4. Design processor management and scheduling strategies for multi-processor systems to optimize performance.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply knowledge of computer system organization and architecture, with a focus on the role of operating systems.
	2. Analyze the structure and operations of operating systems, including key components like process management, memory management, storage management, protection, and security.
	3. Evaluate the various operating system services available to users and applications for efficiency and effectiveness.
	4. Design understanding of the user-operating system interface, system calls, and types of system programs to enhance system functionality and usability.
Content Outline	• Introduction to Operating Systems (OS): Computer-System Organization, Computer-System Architecture, Operating-System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security, Distributed Systems, Special-Purpose Systems, Computing Environments. • Operating-System Services, User Operating-System Interface, System Calls, Types of System Calls, System Programs, Operating-System Design and Implementation, Operating-System Structure, Virtual Machines, Operating-System Generation. • Processor Management: Process concept, Process scheduling, Operations on Processes, Interprocess Communication, Multithreading models, threading issues, Process scheduling algorithms, Thread scheduling, Multiple processor Scheduling. • Process Coordination: Synchronization, Semaphores, Monitors, Deadlocks characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock Avoidance, Deadlock detection, recovery from deadlock.
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply various memory management techniques such as swapping, contiguous memory allocation, paging, and segmentation in practical scenarios.
	2. Analyze the structure and function of the page table to understand its role in memory addressing.
	3. Evaluate fundamental file concepts, including file access methods, directory structures, file sharing, and protection mechanisms, to ensure efficient file management.
	4. Design efficient file systems by understanding their organization, structure, directory implementation, allocation methods, and free-space management to optimize storage and retrieval operations

Content Outline	• Memory Management: Swapping, Contiguous Memory Allocation, Paging, Structure of the Page Table, Segmentation • Virtual memory Management: Demand Paging, Copy-on-Write, Page replacement, Allocation of Frames, Thrashing. • File Management: File Concept, File Access Methods, Directory Structure, File Sharing, File Protection, File-System Structure, File- System Implementation, Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Recovery, Log-Structured File Systems, NFS.
------------------------	--

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

- Design a presentation that explains the fundamental concepts of operating systems and their key components.
- Create slides that cover topics such as computer system organization, architecture, operating system structure, and operations.
- Explain the role of operating systems in process management, memory management, storage management, protection, and security.
- Describe the various operating system services available to users and applications, highlighting their efficiency and effectiveness.
- Discuss the user-operating system interface, system calls, and types of system programs to enhance system functionality and usability.
- Include examples and illustrations to clarify complex concepts and engage the audience effectively.

Module 2:

- Develop a research paper that explores memory management techniques and file system concepts in operating systems.
- Discuss various memory management techniques such as swapping, contiguous memory allocation, paging, and segmentation, explaining their advantages, disadvantages, and practical applications.
- Analyze the structure and function of the page table in virtual memory management, highlighting its role in memory addressing and address translation.
- Evaluate fundamental file concepts, including file access methods, directory structures, file sharing, and protection mechanisms, to ensure efficient file management.
- Design efficient file systems by understanding their organization, structure, directory implementation, allocation methods, and free-space management to optimize storage and retrieval operations.
- Provide real-world examples and case studies to illustrate the implementation and impact of memory management and file system concepts in operating systems.
- Include references to relevant literature and research papers to support your analysis and findings.

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted.

Semester II

2.3 VSC S2

Course Title	Web Technology – I
Course Credits	2 Credits
Course Outcomes	After Completion of this Course, students will be able
	1. Familiarize with the basics of web technologies and the Internet
	2. Develop skills in designing static and dynamic web pages using HTML and CSS.
	3. Develop proficiency in creating interactive forms and multimedia content for web applications.
	4. Gain proficiency in crafting responsive, user- friendly, and visually appealing web designs.
Module 1 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	Describe the Internet and Web Technologies
	Apply Web Standards and Best Practices
Content Outline	Introduction to Web Technologies Overview of the Internet History and evolution of the web. Understanding web protocols (HTTP, HTTPS, FTP). The role of web browsers and servers. Web Standards W3C guidelines and web accessibility (WCAG). Importance of semantic web and SEO. HTML5 Structure of an HTML document. Key HTML elements: headings, paragraphs, lists, links, images, tables, and forms. Semantic elements (<header>, <nav>, <section>, <article>, <footer>, etc.). Multimedia elements: audio and video tags. HTML5 form enhancements: new input types and attributes (e.g., date, email, required, etc.)
Module 2 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	Apply the Basics and styles of CSS
	Differentiate Between Types of CSS and Their Uses
	Utilize CSS Selectors, properties for Styling
Content Outline	Cascading Style Sheets (CSS) Introduction to CSS (5 Hours) Overview of CSS History and evolution of CSS. Importance of CSS in web development. CSS syntax: selectors, properties, and values. Types of CSS Inline CSS: usage and limitations. Internal CSS: defining styles within <style> tags. External CSS: linking external stylesheets using <link> tags. CSS Selectors Basic selectors: element, class, and ID selectors. Grouping and combining selectors: descendant, child, adjacent sibling, general sibling selectors. Pseudo-classes and pseudo-elements: hover, focus, before, after Text Properties Font properties: font-family, font-size, font-weight, font-style. Text alignment, spacing, and decoration: text-align, line-height, letter-spacing, text-decoration. Colour and Backgrounds

	Colour models: HEX, RGB, RGBA, HSL, HSLA. Background properties: background-colour, background-image, background-size, background-repeat, background-position.
Activities towards Comprehensive Continuous Evaluation (CCE)	
Module 1 • Create a static website using HTML, CSS, and JavaScript. • Design a multi-page website with a consistent layout and navigation menu. • Use HTML to structure the content of each webpage, including appropriate tags, elements, and attributes. • Apply CSS to style the website, including selectors, properties, and responsive design techniques for different screen sizes. • Implement JavaScript to add interactivity to the website, such as dynamic content manipulation and form validation. • Ensure the website adheres to web standards and best practices for accessibility and Usability	
Module 2 • Develop a web application with database integration and secure coding practices. • Choose a web development framework (e.g., React, Angular, Vue.js) and use it to build a dynamic web application. • Implement client-side scripting using JavaScript for event handling, form validation, and dynamic content generation. • Use server-side scripting languages (e.g., Python, Ruby) to handle user requests and interact with a backend database. • Design and implement database connectivity, including creating SQL queries for data manipulation and integration with the web application. • Apply secure coding practices to safeguard the web application against common vulnerabilities such as XSS (Cross-Site Scripting) and SQL injection. Test the web application thoroughly to ensure functionality, security, and performance.

Assessment:

Internal Assessment: (50 marks)

Evaluation Scheme:

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below.

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Implementation of Web Pages	Proper use of HTML, CSS, JavaScript for layout, styling, and interactivity	10
Backend/Server-Side Logic	Use of server-side technologies (PHP, Node.js, Python, etc.) and database integration	10

Functionality and Output	Correct working of features (form submission, validations, dynamic content, etc.)	10
UI/UX Design Principles	Aesthetics, layout consistency, responsiveness, accessibility	5
Code Quality and Documentation	Indentation, comments, folder structure, readme files, version control (Git)	5
Viva Voce	Conceptual understanding of HTML, CSS, JS, HTTP, client-server model, etc.	5
Attendance and Conduct	Regularity, discipline, and active participation	5

Given below are two sample projects but it is expected to work on similar sort of projects

Project 1: Using HTML/CSS design a single product page for an e-commerce site.

Project 2: Using HTML/CSS design a single-page resume builder using HTML form

Semester II

2.4 VSC S3

Course Title	Data Analytics Using Spreadsheet
Course Credits	2
Course Outcomes	After going through the course, learners will be able to 1. Apply comprehensive understanding of Microsoft Excel to efficiently navigate through toolbars, interface components, and commands for various tasks. 2. Analyse spreadsheet management techniques, including manipulation of columns, rows, and ranges, and the application of advanced functions and formulas to organize and interpret data effectively. 3. Evaluate advanced Excel techniques such as chart creation, data analysis, PivotTable utilization, and macro implementation for generating meaningful insights and automating tasks in professional and academic contexts. 4. Design strategies for leveraging Excel's capabilities to streamline workflows, improve data accuracy, and enhance decision-making processes using advanced features and functionalities.
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply essential Excel features and interface components to efficiently navigate and utilize the software for data management tasks. 2. Analyse data structures in Excel, including columns, rows, and ranges, to effectively organize, format, and manage datasets. 3. Evaluate the application of basic and advanced Excel formulas and functions for accurate data analysis and computation in academic and professional contexts. 4. Design strategies for utilizing Excel functionalities to enhance data manipulation, improve data accuracy, and optimize data presentation using formulas and functions.
Content Outline	• Introduction to Excel : About Excel & Microsoft, Uses of Excel, Excel software, Spreadsheet window pane, Title Bar, Menu Bar, Standard Toolbar, Formatting Toolbar, the Ribbon, File Tab and Backstage View, Formula Bar, Workbook Window, Status Bar, Task Pane, Workbook & sheets • Columns & Rows: Selecting Columns & Rows, Changing Column Width & Row Height, Autofitting Columns & Rows, Hiding/Unhiding Columns & Rows, Inserting & Deleting Columns & Rows, Cell, Address of a cell, Components of a cell – Format, value, formula, Use of paste and paste special • Functionality Using Ranges: Using Ranges, Selecting Ranges, Entering Information Into a Range, Using AutoFill, text split using text to column, remove duplicates. • Creating Formulas: Using Formulas, Formula Functions – Sum, Average, if, Count, max, min, Proper, Upper, Lower, Using AutoSum, • Advance Formulas: Concatenate, Vlookup, Hlookup, Index, Match, Countif, if, Sumif, Text, Trim, Conditional Formatting.

Module 2(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1.Apply proficiency in creating and formatting various types of charts in spreadsheets to visually represent data and insights effectively.
	2.Analyse data analysis techniques such as sorting, filtering, and data validation to manipulate and interpret spreadsheet data efficiently.
	3.Evaluate the competency in utilizing PivotTables for dynamic data summarization and analysis, enabling extraction of meaningful insights from large datasets.
	4. Design strategies for utilizing charting tools, data analysis techniques, and PivotTables to enhance data visualization, manipulation, and interpretation skills in professional and academic settings.
Content Outline	• Spreadsheet Charts: Creating Charts, Different types of charts, Formatting Chart Objects, Changing the Chart Type, Showing and Hiding the Legend, Showing and Hiding the Data Table • Data Analysis: Sorting, Filter, Text to Column, Data Validation • Pivot Tables : Creating PivotTables, Manipulating a PivotTable, Using the PivotTable Toolbar, Changing Data Field, Properties, Displaying a PivotChart, Setting PivotTable Options, Adding Subtotals to Pivot Tables • Spreadsheet Tools: Moving between Spreadsheets, Selecting Multiple Spreadsheets, Inserting and Deleting Spreadsheets Renaming Spreadsheets, Splitting the Screen, Freezing Panes, Copying and Pasting, Data between Spreadsheets, Hiding , Protecting worksheets • Making Macros: Recording Macros, Running Macros

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

- Assignment 1: Introduction to Excel: Create a presentation or infographic detailing Excel's overview, uses, software features, and interface elements.
- Assignment 2: Columns & Rows Mastery: Manipulate columns and rows, adjust widths and heights, hide/unhide, insert/delete, and understand cell addressing.

Module 2:

- Assignment 3: Formula Mastery: Apply basic formulas (e.g., sum, average, Max, Min) and advanced functions (e.g., VLOOKUP, COUNTIF, Index+Match) to analyze data. Analyze data using conditional formatting.
- Activity: Chart Creation and Analysis: Create various chart types, format objects, change chart types, and analyze data visually for insights.
- Assignment 4: Data Analysis and PivotTables: Use sorting, filtering, text to columns, data validation, and PivotTables for dynamic data analysis and summarization.
- Activity: Spreadsheet Tools Exploration Practice moving between sheets, selecting multiple sheets, inserting/deleting/rename sheets, and utilizing features like splitting, freezing, copying/pasting. Macro Making Task: Record, run, and delete macros to automate repetitive tasks in Excel.

2. Frye, C. D. (2019). Excel 2019 All-in-One For Dummies. For Dummies.
3. McFedries, P. (2019). Excel 2019 Formulas and Functions. Wiley.
4. Alexander, M., & Kusleika, D. (2019). Excel Macros For Dummies. For Dummies.
5. DeMarco, T. (2017). The Excel Annoyances Book. O'Reilly Media.

Evaluation Scheme:

Depending on the activities mentioned above, a Data Analytics Using Spreadsheet project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be conducted by organizing a project presentation and practical demonstration at the College level.

An External Examiner (Industry Expert or Subject Expert) appointed by the College will evaluate the project based on the evaluation rubrics given below.

Students are expected to select a real-life or academic dataset and use Microsoft Excel to clean, organize, analyse, visualize, and interpret the data. The project should demonstrate practical application of the spreadsheet features covered in Modules 1 and 2.

The Rubric will have the following Evaluation Parameters:

Evaluation Parameters	Description / Evaluation Points	Marks
Understanding of Spreadsheet & Data Management	- Demonstrate knowledge of Excel interface, workbook, worksheets, cells, rows, columns and ranges. - Create and organize a structured dataset. - Perform formatting, sorting, filtering, data cleaning, Text to Columns and removal of duplicate records. - Demonstrate appropriate use of worksheets and spreadsheet management features.	10
Formulas & Functions	- Apply appropriate formulas and functions such as SUM, AVERAGE, COUNT, MAX, MIN, IF, COUNTIF, SUMIF, VLOOKUP/HLOOKUP, INDEX, MATCH, CONCATENATE and TEXT functions. - Demonstrate correct use of relative/absolute references wherever required. - Apply Conditional Formatting to identify important data patterns.	10
Data Analysis & Visualization	- Analyse the selected dataset using sorting, filtering and data validation. - Create appropriate charts such as Column, Bar, Line, Pie or other suitable charts. - Format chart objects, titles, legends and data tables appropriately. - Interpret the charts and derive meaningful conclusions from the data.	10
PivotTable & Advanced Spreadsheet Analysis	- Create and manipulate PivotTables. - Change data fields, summarize data and apply subtotals. - Create PivotCharts where appropriate. - Use multiple worksheets and perform analysis across spreadsheets. - Demonstrate freezing panes, worksheet protection and other relevant spreadsheet tools.	10
Practical Implementation, Presentation & Interpretation	- Demonstrate the complete working of the project in Excel. - Explain the methodology and analytical findings clearly. - Demonstrate effective use of Excel features to solve a real-world problem. - Answer questions raised by the examiner and explain the formulas, charts and analytical results.	10
Total		50

Suggested Project Structure

Students should prepare the Excel project using the following structure:

1. Title of the Project
2. Problem Statement
3. Objectives of the Project
4. Source and Description of Dataset

5. Data Collection
6. Data Cleaning and Preparation
7. Data Organization in Excel
8. Application of Formulas and Functions
9. Data Analysis
10. Charts and Data Visualization
11. PivotTable / PivotChart Analysis
12. Macro Implementation – Where Applicable
13. Findings and Interpretation
14. Conclusion
15. Suggestions / Recommendations

The final submission should preferably contain an **Excel workbook** with appropriate worksheets and a short **project report/presentation**.

Given below are sample projects, but it is expected to work on similar sorts of projects.

Project 1: Student Academic Performance Analysis

Create an Excel-based data analytics project using student academic data.

Dataset may contain:

- Student ID
- Student Name
- Gender
- Course
- Semester
- Subject Marks
- Total Marks
- Percentage
- Grade
- Attendance
- Result

Students should perform:

- Data entry and formatting.
- Remove duplicate records.
- Sort students according to marks/percentage.
- Filter students according to course, semester or result.
- Calculate:
 - Total marks
 - Average marks
 - Maximum marks
 - Minimum marks
 - Percentage
- Use **IF** to determine Pass/Fail.
- Use **COUNTIF** to count successful students.
- Use **SUMIF** to calculate category-wise totals.
- Use **VLOOKUP/HLOOKUP** for retrieving relevant information.
- Apply **Conditional Formatting** to identify high/low performers.
- Create charts showing:
 - Subject-wise performance
 - Pass/Fail ratio

- Course-wise performance
- Create a **PivotTable** for semester/course-wise performance.
- Create a **PivotChart**.
- Present important findings and recommendations.

Project 2: Sales Data Analysis Using Excel

Prepare a sales analytics project using a dataset containing:

- Invoice Number
- Date
- Product
- Category
- Salesperson
- Region
- Quantity
- Unit Price
- Total Sales
- Discount
- Profit

Students should:

- Clean and organize the dataset.
- Use formulas to calculate sales and profit.
- Apply **SUM, AVERAGE, MAX, MIN, IF, SUMIF and COUNTIF**.
- Use **VLOOKUP/INDEX-MATCH** to retrieve product information.
- Apply sorting and filtering.
- Apply data validation.
- Use conditional formatting.
- Create charts for:
 - Monthly sales
 - Product-wise sales
 - Region-wise sales
 - Profit analysis
- Create PivotTables for:
 - Region-wise sales
 - Product-wise sales
 - Salesperson-wise performance
- Create a PivotChart.
- Prepare conclusions regarding the best-performing products and regions.

Semester II

2.5 OEC (Open Elective Course-II)

Course Title	Intellectual Property Rights
Course Credits	4
Course Outcomes	After going through the course, learners will be able to 1. Apply knowledge of Intellectual Property Rights (IPR) principles to effectively protect their creative work from infringement. 2. Analyse the various uses and applications of Intellectual Property (IP) in different contexts such as business, innovation, and creative industries. 3. Evaluate strategies for utilizing Intellectual Property to safeguard and promote their own creative works and innovations. 4. Design a comprehensive understanding of the registration processes for Copyrights, Patents, and Trademarks, ensuring they can navigate and utilize these protections effectively.
Module1 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply knowledge of the justifications and rationales for protecting intellectual property to real-world scenarios, such as explaining the economic benefits of IP protection in innovation-driven industries. 2. Analyse the ethical and legal frameworks surrounding intellectual property protection, examining how different cultural and legal contexts influence these frameworks. 3. Evaluate the impact of intellectual property protection on technological advancement, creativity, and societal development, considering both positive and negative aspects. 4. Design strategies to advocate for and defend intellectual property rights based on a deep understanding of the philosophical, economic, and legal justifications for IP protection.
Content Outline	• Basic Principles and Acquisition of Intellectual Property Rights: Philosophical Aspects of Intellectual Property Laws, Basic Principles of Patent Law, Patent Application procedure, drafting of a Patent Specification, Understanding Copyright Law, Basic Principles of Trade Mark, Basic Principles of Design Rights, International Background of Intellectual Property.
Module2 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply knowledge of different countries' Intellectual Property Rights (IPR) acts to navigate international business and legal contexts effectively. 2. Analyse the similarities and differences between IPR acts across various countries, considering cultural, economic, and legal factors. 3. Evaluate the effectiveness of different countries' IPR acts in protecting intellectual property rights, considering enforcement mechanisms and international agreements. 4. Design strategies for multinational corporations or creators to navigate and comply with diverse IPR acts globally, ensuring comprehensive protection of intellectual property assets.

Content Outline	• Information Technology Related Intellectual Property Rights: Computer Software and Intellectual Property-Objective, Copyright Protection, Reproducing, Defences, Patent Protection. • Database and Data Protection-Objective, Need for Protection, UK Data Protection Act, 1998, US Safe Harbor Principle, Enforcement. • Protection of Semi-conductor Chips-Objectives, Justification of protection, Criteria, Subject matter of Protection, WIPO Treaty, TRIPs, SCPA. • Domain Name Protection- Objectives, domain name and Intellectual Property, Registration of domain names, disputes under intellectual Property Rights, Jurisdictional Issues, and International Perspective.
Module3 (Credit 1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply knowledge of different patents and copyrights information to effectively distinguish between types of intellectual property protections. 2. Analyse the detailed process of patenting and development, including requirements, timelines, and implications for innovation and business. 3. Evaluate the procedure of trademark development in terms of legal requirements, market impact, and brand protection strategies. 4. Design strategies for creators and innovators to navigate and utilize patenting, copyrighting, and trademarking processes to safeguard their intellectual property effectively.
Content Outline	• Patents (Ownership and Enforcement): Objectives, Rights, Assignments, Defenses in case of Infringement. • Copyright (Ownership and Enforcement): Copyright: Objectives, Rights, Transfer of Copyright, work of employment Infringement, Defenses for infringement. • Trademark (Ownership and Enforcement): Trademarks: Objectives, Rights, Protection of goodwill, Infringement, Passing off, Defenses. Designs: Objectives, Rights, Assignments, Infringements, Defenses of Design Infringement.
Module4 (Credit1)	
Learning Outcomes	After learning the module, learners will be able to 1. Apply knowledge of new developments in Information Technology and Cyber laws to adapt and integrate emerging technologies responsibly. 2. Analyse the basics of Cyber laws and new technologies, including their implications on privacy, security, and digital rights. 3. Evaluate case studies related to Cyber laws and new technology to understand their practical applications and legal challenges. 4. Design strategies for implementing Cyber laws effectively in response to technological advancements, ensuring legal compliance and ethical practices in information technology.
Content Outline	• Enforcement of Intellectual Property Rights: Civil Remedies, Criminal Remedies, Border Security measures.

	Practical Aspects of Licensing: Benefits, Determinative factors, important clauses, licensing clauses. • Cyber Law: Basic Concepts of Technology and Law: Understanding the Technology of Internet, Scope of Cyber Laws, Cyber Jurisprudence Law of Digital Contracts: The Essence of Digital Contracts, The System of Digital Signatures, The Role and Function of Certifying Authorities, The Science of Cryptography. • Case studies: Case studies related to different cyber crimes and punishment can be given.
--	--

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

- Apply knowledge of the justifications and rationales for protecting intellectual property to real-world scenarios in the technology sector.
- Analyse the ethical and legal frameworks surrounding intellectual property protection, considering global cultural and legal contexts.
- Design strategies to advocate for and defend intellectual property rights within the firm's innovation-driven initiatives.

Module 2:

- Evaluate the effectiveness of different countries' Intellectual Property Rights (IPR) acts in protecting intellectual property rights.
- Analyse the similarities and differences between IPR acts across various countries, considering cultural, economic, and legal factors.
- Design strategies for navigating and complying with diverse global IPR acts to ensure comprehensive protection of intellectual property assets.

Module 3:

- Apply knowledge of patents, copyrights, trademarks, and designs to develop a cohesive intellectual property protection strategy.
- Analyse the detailed processes of patenting, copyrighting, and trademark development, including legal requirements and implications.
- Evaluate case studies related to intellectual property disputes to understand practical applications and legal challenges.

Module 4:

- Design strategies for implementing Cyber laws and intellectual property enforcement measures to protect digital assets.
- Analyse the basics of Cyber laws and their implications on privacy, security, and digital rights in international contexts.
- Develop a plan for integrating new technologies while ensuring legal compliance and ethical practices in intellectual property management and cybersecurity.

2. Leland, C. R. (1995). Licensing Art & Design. Allworth Press.
3. Leland, C. R. (1995). A Professional's Guide to Licensing and Royalty Agreements. Allworth Press.
4. Warda, M. (2002). How To Register Your Own Copyright. Sphinx Publishing.

Evaluation Scheme:

Depending on the activities mentioned above, a **project based on Intellectual Property Rights (IPR)** should be developed for **50 marks**. The internal assessment, which is a **project evaluation**, will be conducted by organizing a **project presentation at the College level**.

An **External Examiner (Industry Expert / Legal Expert / Subject Expert)** appointed by the College will evaluate the project and presentation based on the **evaluation rubrics given below**.

The project may be undertaken **individually or in a group**, as decided by the college/department. Students are expected to select an IPR-related topic and demonstrate their understanding through **research, analysis, documentation, practical application, and presentation**.

The Rubric will have the following Evaluation Parameters:

Evaluation Parameters	Description / Evaluation Points	Marks
Understanding of Intellectual Property Rights	- Explain the concept, objectives and importance of IPR. - Identify different forms of IPR such as Patent, Copyright, Trademark and Design Rights. - Explain the need and justification for protection of intellectual property.	10
IPR Research & Legal Understanding	- Study relevant IPR laws, rules and international agreements. - Explain patent, copyright, trademark and design registration/protection procedures. - Demonstrate understanding of WIPO, TRIPS and relevant national/international frameworks.	10
Practical Application & IPR Documentation	- Apply IPR concepts to a real or hypothetical product, software, innovation or creative work. - Prepare appropriate IPR-related documentation such as a patent outline, copyright application, trademark search/analysis or licensing agreement. - Identify appropriate protection mechanisms for the selected innovation/work.	15
Case Study / Problem Analysis & Solution	- Analyse a real-world IPR dispute/case involving patent, copyright, trademark, design, domain name or software. - Identify the legal/IPR issues involved. - Analyse infringement, available remedies and possible defences. - Suggest an appropriate solution or IPR protection strategy.	10
Communication & Project Presentation	- Present the project clearly and systematically. - Use appropriate IPR terminology. - Effectively answer questions raised by the examiner. - Demonstrate individual/group contribution and overall understanding of the project.	5
Total		50

Suggested Project Structure

Students should preferably prepare the project report using the following structure:

- 1. Title of the Project**
- 2. Introduction**

3. **Objectives of the Project**
4. **Introduction to the Selected IPR**
5. **Relevant IPR Law / Legal Framework**
6. **Registration / Protection Procedure**
7. **Case Study / Real-World Example**
8. **Analysis of the Case / Problem**
9. **Practical Application**
10. **Findings**
11. **Suggestions / IPR Protection Strategy**
12. **Conclusion**

Sample Projects

Given below are sample projects. Students may undertake these or **similar IPR-based projects** with the approval of the subject teacher.

Project 1: Trademark and Brand Protection

Select a real or hypothetical business/startup and:

- Identify its brand name, logo and tagline.
- Explain why trademark protection is required.
- Conduct a basic trademark availability/search exercise.
- Identify possible trademark classes.
- Study the registration procedure.
- Analyse possible infringement and passing-off situations.
- Prepare a **Trademark Protection Strategy**.

Project 2: Domain Name and Intellectual Property Rights

Select a domain-name dispute and study:

- Meaning and importance of domain names.
- Domain names and trademarks.
- Registration of domain names.
- Domain-name infringement.
- Cybersquatting.
- Dispute-resolution mechanisms.
- Jurisdictional issues.
- International perspective.
- Prepare recommendations for protecting a business domain name.

Evaluation Scheme:

External Assessment: (Marks 50)

End Semester examination of 50 marks for 2 hours duration will be conducted.

Semester II

2.6 SEC

Course Title	Multimedia System
Course Credits	2
Course Outcomes	After going through the course, learners will be able to
	1. Apply creativity, organization, and communication effectively in project stages.
	2. Analyse and optimize text, images, sound, and video for different mediums.
	3. Evaluate mastery of multimedia software tools for image editing, sound editing, animation, and video production.
	4. Design efficient file management strategies using compression techniques like CODECs, GIF, JPEG, MPEG to control file sizes.
Module 1(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply understanding of multimedia significance and project development stages.
	2. Analyse font types, utilize text editing tools, and design web-specific multimedia content.
	3. Evaluate production of still images using bitmap and vector drawing techniques, and understanding of color theory and image file formats.
	4. Design application of digital audio concepts, video technology workings, and animation principles in multimedia projects effectively.
Content Outline	• INTRODUCING MULTIMEDIA: Multimedia- Definitions, Use of Multimedia, Introduction To Making Multimedia: The Stages of a Multimedia Project, Need, Creativity, Organization, Communication. • Text- About Fonts and Faces, Cases, Serif Versus Sans Serif, Using Text in Multimedia, Computers and Text, Font editing and design tools, Hypermedia and Hypertext. Designing for the World Wide Web-Developing for the Web, Text for the Web, Images for the Web, Sound for the Web, Animation for the Web. • IMAGES: Images: Making Still Images, Bitmaps, Vector Drawing, 3-D Drawing and Rendering, Color, Understanding Natural Light and Color, Computerized Color, Color Palettes, Image File Formats. • Sound: Multimedia System Sounds, Digital Audio, MIDI Audio, Audio File Formats, MIDI vs Digital Audio, Audio CD Playback. Audio Recording. Voice Recognition & Response. Video: How Video Works, Broadcast Video Standards: NTSC, PAL, SECAM, ATSC DTV, Analog Video, Digital Video, Digital Video Standards – ATSC, DVB, ISDB, Video recording & Shooting Videos, Video Editing, Optimizing Video files for CD- ROM, Digital display standards. • Animation: Principle of Animations. Animation Techniques, Animation File Formats

Module 2(Credit 1)	
Learning Outcomes	After learning the module, learners will be able to
	1. Apply mastery of image editing software for diverse content creation.
	2. Analyse hardware differences to select appropriate devices.
	3. Evaluate proficiency in various multimedia software tools.
	4. Design effective application of compression principles for web development.
Content Outline	• IMAGE EDITING: Image Editing software: selection tools, working with layers, masks and channels, correcting and enhancing photographs, typographic design and vector drawing, working with 3D images, producing files for the web. • Hardware: Macintosh versus Windows, Connections: IDE, SCSI, UIDE, ATA, USB, Firewire etc. Storage devices, Input, Output devices for Multimedia Projects • Multimedia Software Tools: Text Editing & Word processing tools, OCR S/W, Painting & Drawing Tools, 3D Modelling & Animation Tools, Image editing tools, Sound Editing tools, Animation, Video & Digital movie tools, Overview of various types of Multimedia Authoring tools. • Compression: CODEC, Types of Compression & redundancies, GIF, JPEG & MPEG Standards Overview, Fractals • Multimedia tools for WWW & Designing for WWW: Plug Ins, Text, Images, Sound & Animation for the Web

Assignments/Activities towards Comprehensive Continuous Evaluation (CCE)

Module 1:

Assignment: Multimedia Project Proposal:

- Develop a proposal for a multimedia project, including objectives, target audience, and content outline.
- Present the proposal to the class, highlighting the need for creativity and effective communication.

Assignment: Font Analysis and Design:

- Analyze different font types and their usage in multimedia.
- Design a multimedia presentation focusing on font selection and its impact on communication.

Assignment: Image Creation and Editing Task:

- Create still images using bitmap and vector drawing techniques.
- Edit and enhance the images using image editing software, considering color theory and file formats.

Assignment: Audio Recording and Editing Exercise:

- Record and edit audio clips using sound editing software.
- Explore various audio file formats and techniques for enhancing audio quality.

Assignment: Video Production and Optimization Project:

- Produce a short video clip, applying principles learned about video production, editing, and optimization.
- Optimize the video for CD-ROM distribution and digital display standards.

Module 2:

Assignment: Image Editing and Web Production Task:

- Use image editing software to produce web-ready graphics, focusing on selection, layering, and optimization techniques.

Assignment: Hardware and Device Comparison:

- Research and compare Macintosh and Windows systems, as well as various hardware connections and storage devices.
- Present findings in a comparative analysis report.

Assignment: Multimedia Software Exploration:

- Explore various multimedia software tools, including text editing, painting, 3D modeling, animation, and sound editing.
- Create a multimedia project using a combination of these tools.

Assignment: Compression Techniques Analysis:

- Investigate different compression techniques and standards such as CODECs, GIF, JPEG, MPEG, and Fractals.
- Compare and contrast techniques and present findings in a multimedia presentation.

Assessment Internal Assessment – 50 Marks

Evaluation Scheme:

Depending on the activities mentioned above a project should be developed for 50 marks. The internal assessment, which is a project evaluation, will be done by conducting a project presentation at the College level, where an External Examiner (Industry Expert or Subject Expert) appointed by the College will be evaluating the project depending on evaluation rubrics given below.

The Rubric will have the following Evaluation Parameters:		
Evaluation Parameters	Description / Evaluation Points	Marks
Core Functionality & Feature Coverage	Implements all multimedia features (e.g., image/audio/video processing, compression, codecs, GUI) correctly and completely	10
Code Structure & Best Practices	Modular, reusable code with good documentation, follows design patterns and clean coding practices	10

User Interface & Design Consistency	Attractive and intuitive UI/UX; consistent layout, design aesthetics, and responsive behavior	10
Input Validation & Exception Handling	Validates multimedia input types (image/audio/video), prevents crashes, and handles exceptions gracefully	10
Technical Documentation	Well-organized report: introduction, methods, screenshots, technical details, user manual	10

Given below are two sample projects but it is expected to work on similar sort of projects

Project 1: Mini Multimedia Player with Custom Codec Support

Create a basic multimedia player that supports multiple audio/video formats and demonstrates codec implementation.

Project 2: Image & Video Compression Toolkit

Build a tool that demonstrates compression techniques and shows quality-size trade-offs visually.
